How to Make a Glitter Jar

All you need is clear glue, food coloring, and glitter.

YOU WILL NEED:

- Bottles or jars (any shape, size you like) – this recipe is based off an 8-ounce size jar.
- 2/3 cup (or 6-ounce bottle) of clear washable school glue
- 1/4-1/2 cup of water (warm or room temperature is best we found for mixing with the glue)
- Food coloring
- 1 tablespoon or so of glitter or confetti
- Pipe cleaners and construction paper (optional for decorating jars)

HOW TO MAKE A GLITTER JAR

STEP 1: Empty the glue into your jar.

STEP 2: Add about 1/4 cup of warm water to the glue and mix well to combine.

STEP 3: Next, add your choice of food coloring and stir to combine! If you are adding glitter or confetti, stir the glitter or confetti into the glue mixture now. You can even combine glitter and confetti! Look for fun theme confetti for any season or holiday and this basic process will be so easy to repeat to make a glitter jar for any occasion.

STEP 4: Now it’s time to get your glitter jar sparkling! Seal the jar and shake well.

TIP: If the glitter or confetti does not move around easily, add more warm water. If the glitter or confetti moves too quickly, add additional glue to slow it down.

Changing the viscosity or consistency of the mixture will change the movement of the glitter or confetti. There’s a bit of science for you too! When you like the motion your glitter jar makes, glue the lid on securely.
